Panels Series

No longer are flat walls the norm, ERTH Panels enable the natural beauty of stone to truly express itself by adding depth, texture and stunning appeal to any interior or exterior wall. This stone is strategically cut and designed to fashion a very exquisite and symmetrical appeal.

</table>

### FREEZE THAW

- **Average Water Absorption**: \( \leq 1\% \)
- **Average Mass Loss**: Nil

### COLOUR RANGE

Due to the nature of natural stone, colour may vary between batches. This is standard across the natural stone industry.

### NAME | CODE / CORNER | STONE TYPE
---|--------------|---------
Blustone | 90F / 90F-C | Limestone
Cream Quartzite | 40F / 40F-C | Quartzite
Grey Wolf | 60F / 60F-C | Marble
Mountain Grey | 101N | Limestone
Silver Fox | SF-N | Limestone
Silver Fox | SF-PAN / no corner | Limestone
White Wolf | 06F / 06F-C | Marble

Stone.
STEP 1
Ensure all surfaces to be faced are clean and free of all loose material and dust. Surfaces to be faced must be structurally sound and comply with local building codes. Apply starter strips where required and ensure all starter strips are installed perfectly level.

STEP 2
Apply the mortar to the back of each panel using a minimum 3/8” notched trowel. Ensure all depressions on the back of the panel are filled and that the edges of the panel are kept clean from mortar.

STEP 3
Place the stone panel in place and ensure proper adhesion is achieved by pressing firmly on the face of the stone. When installing, ensure all mortar is removed from the edges of the stone prior to installing the adjacent pieces. This will ensure that all adjacent pieces are installed as tight as possible and thus eliminating unsightly gaps. Vertical joints should be randomly staggered to disguise the seams.

STEP 4
Where needed, individual pieces should be cut with a wet saw to ensure accurate and clean cuts. Never mark the surface of the stone with a permanent marker as this will be absorbed by the stone and cannot be removed.

STEP 5
During the installation and after the installation is completed, wipe the surface clean with clean water only, ensuring to remove all mortar and dust from the surface.

STEP 6
When wrapping the panels around corners, the use of our corner pieces is recommended. See our corner installation instructions for more details.

RECOMMENDED MORTAR
Chembond® MagniFlex™ Super 8820 or Mapei® Ultraflex™ RS

Silver Fox Panels must be installed using Mapei® Ultraflex™ RS
White Wolf Panels must be installed using a white mortar to prevent staining.

RECOMMENDED SEALER (only when required.) A professional grade natural stone penetrating sealer may be used on ErthCoverings stone veneers.
STEP 8
ErthCoverings recommends the use of sealer on all applications susceptible to staining to protect the stone and allow for easy cleaning (especially in high traffic areas). A test sample may be required to determine the desired look.

NOTE:
These installation instructions are intended as a guide only. For further assistance, please contact ErthCoverings at 1 866 657 6606 (Toronto).

## Panels Calculation

### STEP 1
Calculate the total square feet of the area to be covered (subtract windows, doors, etc.)

### STEP 2
Add 10% to the total square feet for waste.

### STEP 3
Add your total linear feet of outside corner. (Figure 1)

### STEP 4
Multiply your total linear feet of outside corner by 2. This is the amount of corner panels required.

### STEP 5
Subtract the amount of corner panels required from the total square footage (including waste). This is the amount of regular panels required. (If this figure is less than zero, then only corner panels are required).

<table>
<thead>
<tr>
<th>Step</th>
<th>Formula</th>

Stone.
CLEANING
Dirt, grime, etc., may be removed by using a solution of granulated soap or detergent and water with a bristle brush. Do not use a wire brush, as it will cause damage to the surface. Rinse immediately with fresh water. For help with stubborn cleaning problems, contact ErthCoverings. Do not attempt to clean using acid or acid-containing products, power washing, sandblasting or wire-brush cleaning.

SALT & DE-ICING CHEMICALS
Do not use de-icing chemicals on areas immediately adjacent to an ErthCoverings stone veneer application. Do not allow snow to be piled up against the stone surface for a prolonged period of time.

SCUFFING
Scuffing occurs on all natural stone. Occasionally some scuffing will occur on the surface of ErthCoverings. Some scuff marks can be removed by cleaning as described above.

EFFLORESCENCE
Efflorescence is a water-soluble salt that is deposited on the surface of stucco, concrete, brick and other masonry products by the evaporation of water from the wall. On rare occasions efflorescence will occur on ErthCoverings products. To remove efflorescence, allow the stone to dry thoroughly, and then scrub vigorously with a stiff bristle brush and clean water. Rinse thoroughly-do not use a wire brush.

SEALERS
It is not required to apply sealers to ErthCoverings. However, some customers use sealers to help prevent staining in applications prone to oil stains, smoke, soot, dirt, grime or water splashing. If you choose to use a sealer, make sure it is a breathable sealer. Take note that sealers may enhance the colour of the stone. A sealer may also slow the natural movement of moisture out of the stone and increase the possibility of efflorescence and/or spalling. For information regarding actual performance or application of sealers, contact the manufacturer of the sealer directly.
USE BELOW WATER LEVELS

ErthCoverings will not deteriorate from exposure to fresh liquid water. The use of ErthCoverings below water level, in which the water is chlorinated, treated with chemicals or dirty will likely cause discolouration. Natural stone materials are subject to potential damage from adverse freeze thaw conditions. Water should be drained below susceptible materials prior to freezing temperatures. Pressure and abrasion from constant fast flowing water may cause some surface deterioration. The surface of ErthCoverings may be affected by exposure to extensive salt-water conditions. ErthCoverings should not be considered a waterproof material.
